

Method 1 \rightarrow Extra space solution.

$a =$

	0	1	2
0	1	2	3
1	4	5	6
2	7	8	9

90°

$x =$

	0	1	2
0	7	4	1
1	8	5	2
2	9	6	3

- Take an empty vector of same size as that of a & initialise all rows with 0

$\text{vector} < \text{vector} < \text{int} > \text{rotate}(n, \text{vector} < \text{int} > (n, 0));$

- We can see: $x \Rightarrow a$ relationship

$0,0 \Rightarrow 2,0$ <small>(1-0)</small>	$1,0 \Rightarrow 2,1$ <small>(1-0)</small>	$2,0 \Rightarrow 2,2$ <small>(2-0)</small>
$0,1 \Rightarrow 1,0$ <small>(1-1)</small>	$1,1 \Rightarrow 1,1$ <small>(1-1)</small>	$2,1 \Rightarrow 1,2$ <small>(2-1)</small>
$0,2 \Rightarrow 0,0$ <small>(2-2)</small>	$1,2 \Rightarrow 0,1$ <small>(1-2)</small>	$2,2 \Rightarrow 0,2$ <small>(2-2)</small>
$\underline{\underline{i}} \quad j$	$\underline{\underline{i}} \quad j$	$\underline{\underline{i}} \quad j$
\uparrow $n-1-i$	\uparrow $n-1-i$	\uparrow $n-1-i$

$\text{rotate}[i][j] = \text{matrix}[n-1-i][i]$

T.C $\rightarrow O(n^2)$: S.C $\rightarrow O(n^2)$

Method 2 \rightarrow Matrix arithmetics

To rotate a matrix by 90°

- Take transpose of the matrix
(rows \rightleftharpoons columns)
- Reverse each row

$a =$

	0	1	2
0	1	2	3
1	4	5	6
2	7	8	9

Transpose : $\text{swap}(a[i][j], a[j][i]);$

$a =$

	0	1	2
0	1	4	7
1	2	5	8
2	3	6	9

Reverse : $\text{reverse}(a[i].begin(), a[i].end());$

rows

$a =$

	0	1	2
0	7	4	1
1	8	5	2
2	9	6	3

T.C $\rightarrow O(n^2)$ | S.C $\rightarrow O(1)$
